

# ZETESAL TCS

**ZETESAL TCS** , our cationic fixener, is designed for:

- cationic aftertreatment of reactive and direct dyeings of cellulosics, especially C.I. Reactive Blue 19 and 21
- cationic fixing inside the double fixing process for PA and PA/EL dyeings
- cationic aftertreatment for wool and silk dyeings

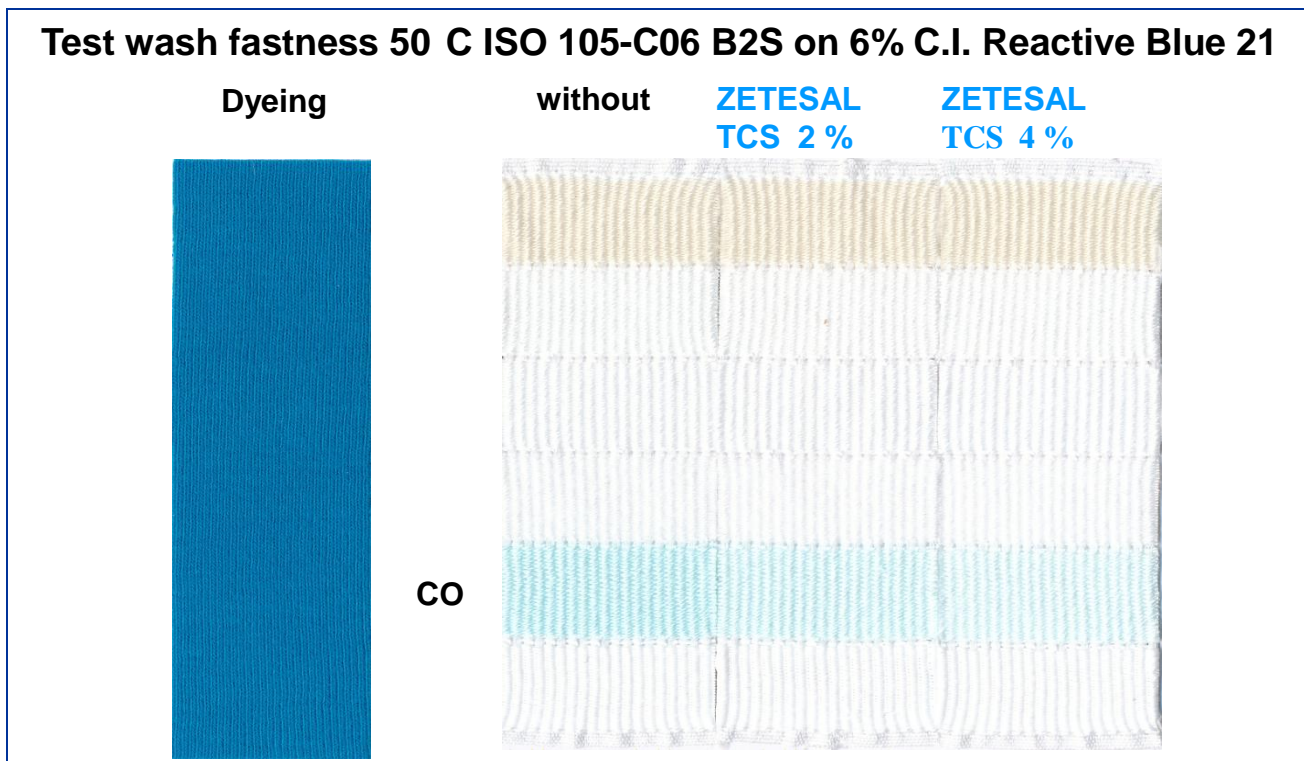

**ZETESAL TCS** improves very well :

- wet fastness level of reactive and direct dyeings of cellulosics, especially C.I. Reactive Blue 19 and 21
- contact fastness of PA and PA/EL dyeings (double fixing process)
- contact and wash fastness of Wool and Silk dyeings

**ZSCHIMMER & SCHWARZ**  
**MOHSDORF GmbH & Co KG**

**ZETESAL TCS** improves very well the wet fastness level of reactive dyeings → **THE problem solver for turquoise shades**

**ZETESAL TCS** is used effectively inside double fixing on PA/EL dyeings → **THE problem solver for contact fastness**
