

ZETESAL TCS

ZETESAL TCS , our cationic fixener, is designed for:

- cationic aftertreatment of reactive and direct dyeings of cellulosics, especially C.I. Reactive Blue 19 and 21
- cationic fixing inside the double fixing process for PA and PA/EL dyeings
- cationic aftertreatment for wool and silk dyeings

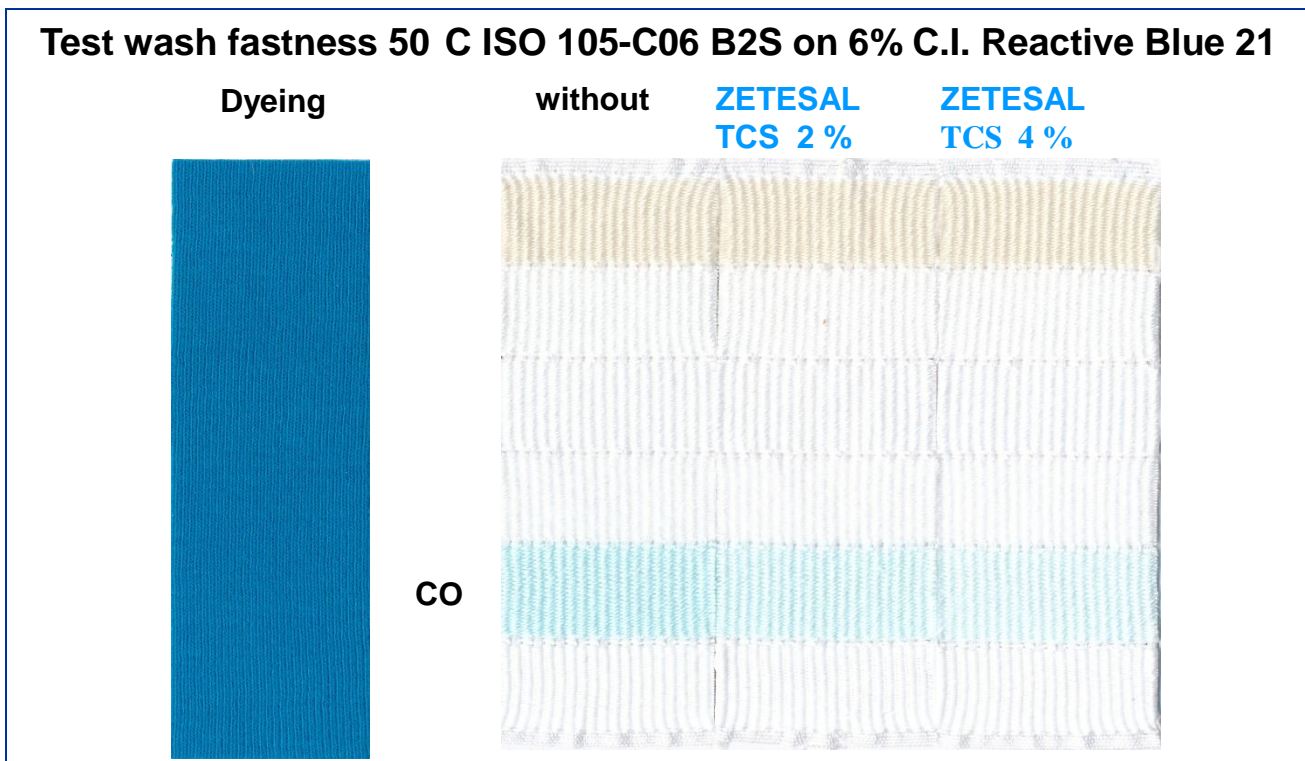

ZETESAL TCS improves very well :

- wet fastness level of reactive and direct dyeings of cellulosics, especially C.I. Reactive Blue 19 and 21
- contact fastness of PA and PA/EL dyeings (double fixing process)
- contact and wash fastness of Wool and Silk dyeings

**ZSCHIMMER & SCHWARZ
MOHSDORF GmbH & Co KG**

ZETESAL TCS improves very well the wet fastness level of reactive dyeings → **THE problem solver for turquoise shades**

ZETESAL TCS improves very well the wet fastness on SE and WO dyeings → **THE problem solver for contact fastness**
