

DyStar 

Working for your benefit.

# Imperon<sup>®</sup> HF "High Fast"

The fast way to turn your pigment prints into high-fliers

# Imperon HF

Imperon HF "High Fast" pigment preparations are innovative products manufactured exclusively with high-performance pigments and advanced milling and dispersing technologies.

In the past, it was virtually impossible to meet demands for high fastness properties and reliable production, especially in the critical red to yellow shade range. Imperon HF "High Fast" pigment preparations solve the problem for pale shades, particularly in this critical range.

## Example: light fastness

Imperon HF products have far higher fastness properties than standard pigment preparations, especially in critical pale shades at concentrations of 0.1-2 g/kg.

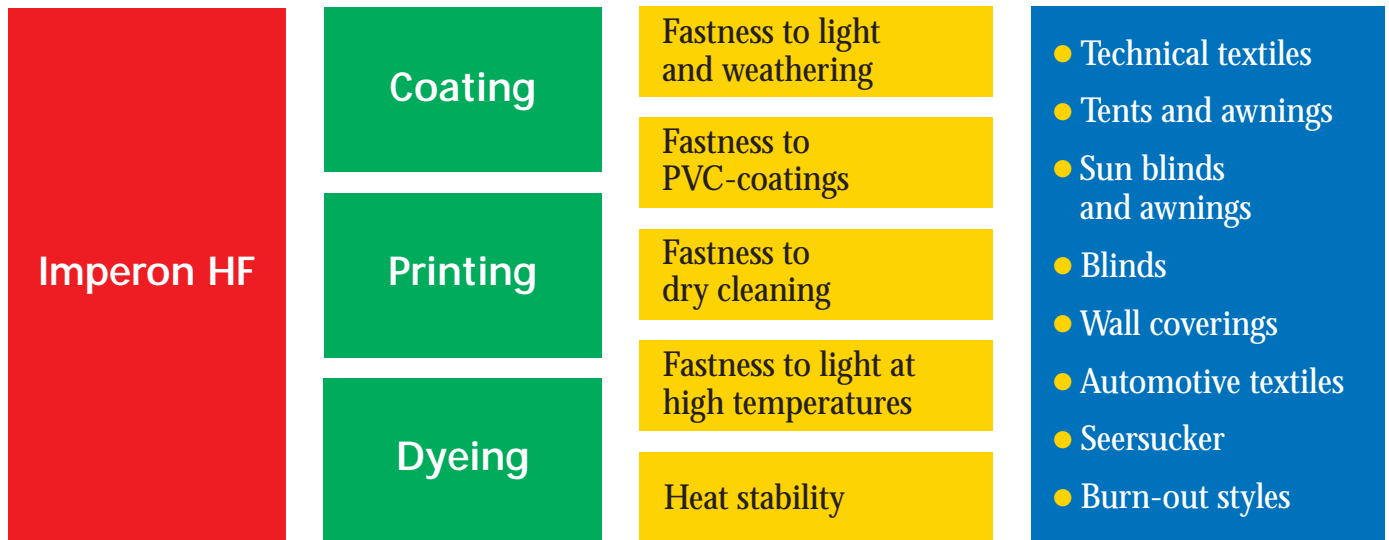

## Example: heat stability ensures reliable production

Imperon HF pigment preparations have outstanding heat stability so there are no variations in shade as a result of common fluctuations in production conditions.

Imperon HF pigment preparations provide genuine added value to textiles. Their excellent properties can be used for a wide range of long-lasting indoor and outdoor products.

### Imperon HF "High Fast" pigment preparations

Imperon HF "High Fast" pigment preparations highlight our innovative strength and our expertise in serving a quality-conscious market segment.

### We provide support for the entire production process

DyStar offers you the benefits of experienced staff and modern service laboratories round the world. Contact us – we will be happy to help you select the right dyes, work out recipes to meet your customers' requirements and provide support throughout the production process.
